Both of them are separated by an arrow. For instance, 2H2 + O2 -> 2H2O denotes that there are four atoms of hydrogen and 2 atoms of oxygen on both sides of the equation. The amount of reactants must be equal to the amount of products. When students get big chemical equations in a balancing equation worksheet, they often find it to be very difficult. We will help you understand through some tips in this article too, to help you get through the process seamlessly.

When balancing equations, remember chemical reactions must satisfy conservation of mass. Check your work to make certain you have the same number and type of atoms on the reactants side as on the products side. A coefficient (number in front of a chemical) is multiplied by all the atoms in that chemical.
