Plant Physiology and Development, Sixth Edition  
This has made Plant Physiology the most authoritative, comprehensive, and widely used upper-division plant biology textbook. In the Sixth Edition, the Growth and Development section (Unit III) has been reorganized and expanded to present the complete life cycle of seed plants from germination to senescence. In recognition of this enhancement, the text has been renamed Plant Physiology and Development.

The process of plant domestication probably began in small garden plots planted near temporary settlements. It is easy to imagine how the loss of seed dormancy might be selected for by a nomadic group, since seeds that germinated and grew rapidly would be more likely to have been gathered than those whose germination was delayed.

Extensive studies in tobacco (*Nicotiana tabacum*, an herbaceous plant) have demonstrated that floral evocation requires the apical bud to pass through two developmental stages (Web Figure 20.4.A). One stage is the acquisition of competence. A bud is said to be competent if it is able to flower when given the appropriate developmental signal.
